

Reusable 3D protective face mask

Description

Social distance regulations cannot be guaranteed in public. These knitted masks provide effective protection for yourself and for others to limit risk of infection. As a rule, they are intended for anyone who enters the public space to travel, do their shopping and carry out professional activities.

The masks are made on a specially converted industrial flat knitting machine using 3D knitting technology. Thanks to the new seamless technology, there is practically zero waste, as the mask comes knitted straight from the machine. A technological innovation enables us to seamlessly introduce the rubber band directly into the knitting process. The ergonomic shape fits around the form of the face. It protects and leaves incomparable comfort and breathability. These masks are an ecological and economical way to protect yourself and others.

Properties of the mask

- Compliant with Antibacterial PA 6.6 yarn, as per Oeko Tex and Detox
- Treatment resistant for more than 40 washes
- 3D anatomical shape, light and comfortable
- Easy breathing thanks to the large space in front of the mouth and nose
- Ecological and economical with maximum security

The masks are designed and certified according to AFNOR standards. The required filtration efficiency against 3 micron particles:

- > 90% for category 1 (protection of experts)
- > 70% for category 2 (consumer protection)

With a filtration capacity of 99%, our masks exceed the limit of category 1 masks recommended for professionals who are in contact with the public. However, they are not intended for nurses or those who are already sick.
